Telos Alliance® Spotlight SaaS™

Simple, secure, and reliable WebRTC made easy, without the need for a locally-deployed signaling server.

Telos Alliance® Spotlight SaaS

Telos Alliance-Hosted Signaling Server

Fully-managed Telos Alliance-hosted signaling server

Overview

WebRTC Made Easy

Spotlight SaaS is a Telos Alliance-hosted signaling server that simplifies the deployment of WebRTC in products like our Axia® Altus and Altus SE™ virtual mixing consoles or the Telos Infinity® VIP Virtual Intercom Platform. It eliminates the need for a locally-deployed signaling server and shifts maintenance and security worries from your desk to Telos Alliance's dedicated team of experts. Spotlight SaaS is sold as a 1-year renewable subscription and requires a Xirsys subscription.

The Perfect Partner to Axia Altus, Altus SE, and Telos Infinity VIP

Looking to simplify the deployment of an Altus or VIP system? Spotlight SaaS is the answer. Name the date and time, and Telos Alliance will activate the service for you, eliminating the pain of testing your own firewall permissions and wondering what new security patch will break connectivity. Simply add the Spotlight SaaS address to your product, and start creating great content!

Features

- Fully-managed service, including software and security updates, provided by Telos Alliance
- 99.5% uptime
- Support for up to 128 simultaneous connections
- Works with Axia Altus, Altus SE, and Telos Infinity VIP

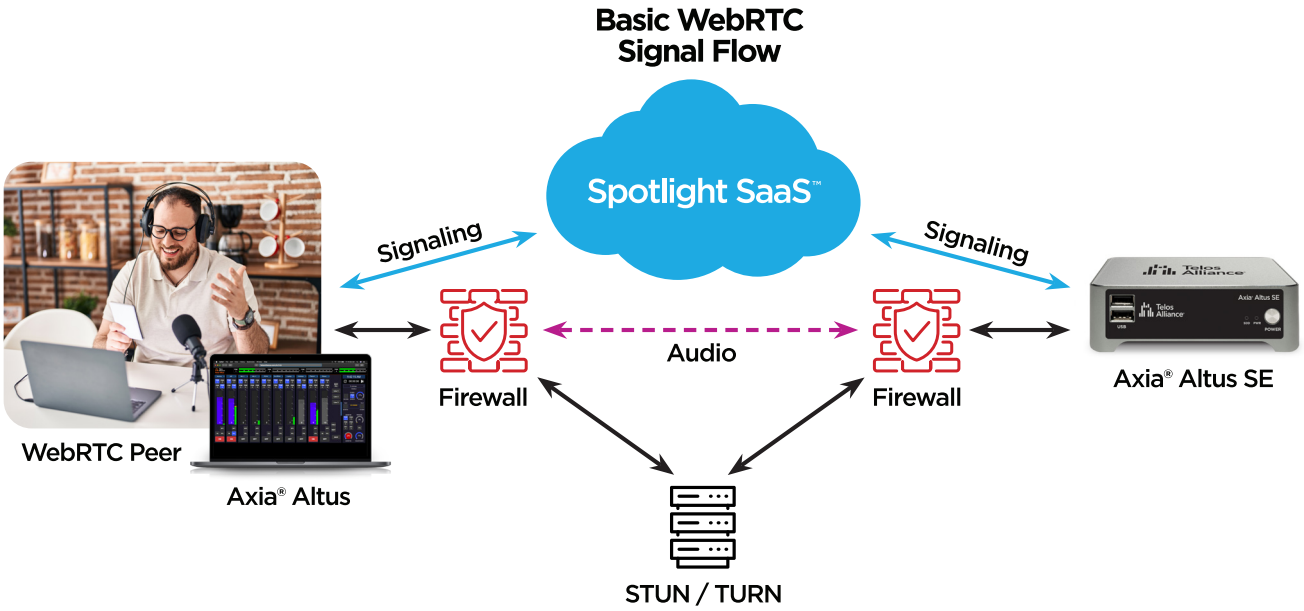

Accessibility and flexibility for dynamic production environments

In Depth

Make Connections Easier

Flexible workflows are a requisite in today's fast-paced production environments. Adding Spotlight SaaS to a compatible Telos Alliance product makes them easily accessible from anywhere, accommodating dynamic production environments. Simply add your Spotlight SaaS address to your Telos Infinity VIP Virtual Intercom or Axia Altus or Altus SE virtualized console, and audio becomes available anywhere you have an internet connection.

Focus on Making Great Content

Managing infrastructure is a task that distracts from your goal of creating compelling content for your audience. Allowing Telos Alliance to provide a fully-managed service removes that task and gives you the peace of mind of knowing Spotlight SaaS will be there anytime and anywhere your content creators need it.

Created with security and reliability in mind

Reliable and Secure

Spotlight SaaS is deployed in a highly reliable architecture. There's no need to worry about multiple disparate internet service providers or power sources. Severe weather and other environmental factors that threaten reliable operation are eliminated. Since a big part of having reliable solutions is knowing your data and content are safe, it is designed with a security-first approach. Patches and improvements are continuously deployed, letting you rest easy in the knowledge that Spotlight SaaS will never be a path of unauthorized access to your network.

A Spotlight Just for You

Each Spotlight SaaS instance is independently deployed. This segregation ensures your data is secure and that your Spotlight SaaS is truly yours.

Specifications

- Spotlight SaaS is a signaling server, not an ICE server
- Highly reliable architecture
- Automated security patches
- Region-specific deployment optimized to your location
- 99.5% uptime
- Monitoring and automatic disaster recovery
